What a great year 2019 was for the Collie. So many breeders joined in genetic testing for our beautiful Collies. I was impressed how many new breeders were testing for the first time. Whenever possible, the Collie Health Foundation will help our breeders with making genetic testing from approved labs as affordable as possible. We have been working with our New York Attorney on updating our By-Laws and she happens to be a tax attorney too. We know now that if we offer subsidies by paying the labs directly, we should have no issues with our charitable status. We are able in a couple of cases to pay reimbursements if they fall within our purposes, such as the Marth E. Hoffman CHIC DNA Banking Clinic.

I know many of you have been waiting to learn about the subsidies for rcd2-PRA and DMS testing. I have been making myself a nuisance with Wisdom Health trying to get them to set up a way that we can pay for subsidies. It looks like they have hired a new Tech person to try to add an area where a code can be entered so that we can again lower our breeders’ costs.

CHF is excited to offer you four health clinics this year for the first time! Thanks to Dr. Casey Knox from Wisdom Health and Sue Pierce-Kelling from OptiGen, they will be heading up the Optimal Selection™ Clinic and the PRA and DMS collection clinic. Our very own Nancy Kelso, DVM will again be running the Martha E Hoffman CHIC DNA Banking clinic. And for the first time, we will be offering an eye clinic all day Friday April 3rd by Dr. Riis retired from Cornell University and a collaborator with Dr. Gustov Aguirre. We will need volunteers to help in all of these areas plus our silent auctions, night auction and dinner and of course promotional items. Please see additional information on Page 4.

We will have a special treat at our annual cocktail hour, dinner, and live auction this year. Dr. Casey Knox and Sue Pierce-Kelling will be doing a recap of what was said at the Breeders’ Ed Seminar. Then we will have one of the founders of the CHF, Dr. Bill Broken, give us a short look into our past and tell us how and why the Foundation started. Our Founders had insights that no other breed parent club had seen before. We will have this portion of the annual meeting along with Dr. Casey’s presentation taped for our YouTube channel.

continued on Page 2
The live auction will be another amazing event. We have some lovely donations again this year. We have a few original pieces of art, a vacation condo and so much more. Please see page 3.

All of this takes volunteers. If you can give us two to four hours of your time, we need you! Isabel Ososki is handling volunteers for the 4 health clinics. Pati Merrill is coordinating the Silent Auction and I need a volunteer to set up and manage the Live Auction.

Hope to see you in Syracuse!

--Robette

Love is in the air
and so is Collie hair!
See you in the ring
in Syracuse this Spring!

Cocktails & Speaker – Dinner with Live Auction to Follow

Thursday April 2, 2020 – 6:00 PM - ???
Marriott Syracuse Downtown - The Persian Terrace
100 East Onondaga Street, Syracuse, NY 13202

Cocktails & Speaker 6:00 PM – Cash Bar

Inherited Eye Diseases in Collies and other Canines
Speaker: Sue Pierce-Kelling Manager of OptiGen a Division of Wisdom Health

Introduction of CHF Officers, Board Members & Corportors 7:00 PM
Announcement of the 2019 President’s Trophy Winner

Dinner 7:15 PM – Italian Buffet - Auction to follow
  Salad & Bread
  Cheese Tortellini and Marinara
  Choice of Pasta & 2 Sauces
  Meatballs & Gianelli Sausage
  Chef’s Choice Dessert

**There will be a gluten free option

$40 Per Person – Children Under 6 Free, 7 through 12 Reduced Price

Mail Reservations with checks made out to CHF before March 22 to:
Collie Health Foundation, Inc., Gerrie Oliver, 60 Columbus Ave., Closter, New Jersey, 07624 – olivergerrie@gmail.com

A VERY limited amount of tickets may be available March 25 – April 1. Reserve early to guarantee your selection.

We have another great lineup of auction items for your consideration. The list is not yet complete but to whet your appetite the partial list includes:

- Collie theme quilt, donated by Amy Gau
- Handmade figurine of CH Lick Creek’s Drummer Boy from the estate of Sue Barlow
- 40” x 35” framed Lorraine Still original of CH Pleasant Hill Torch Song & CH Pleasant Hill Temptress, Billy Aschenbrenner’s estate, donated by Kathy Peters
- “Found”, a beautifully framed 22” x 18” print by Walter Hunt, donated by Kathy Peters
- 11.75” x 8” cross stich done of your dog by Susan Graves, donated by Susan and Dewayne Graves
- Original Howard Van Dyck framed artwork (pastel) of “Theodore Bear” from the estate of Mary Lenertz
- Original by Cindy Alvarado
- The Collie in America and A Century of Collies both by Gayle Kaye from the estate of Mary Lenertz
- A fun painting by Pati Merrill
- A fabulous piece of original jewelry by G+G Studios, donated by Ana and Julien Goulet
- Two night (three day) stay at a 3-bedroom riverfront condo in Williamsburg, VA, donated by Deborah Gates
We are happy to offer the following clinics at the 2020 CCA in Syracuse, NY. But, we will need volunteers to help in all testing areas. Please email Isabel Ososki at silverthreadcollies@prodigy.net

Martha E. Hoffman CHIC/DNA Banking Project
Run by: Dr. Nancy Kelso, DVM
When: Wednesday, April 1 – Friday, April 3
9 – 11 AM and 1 – 3 PM (note: possibly no Friday afternoon clinic due to show ring conflict)
Location: Collie Health Foundation Table – stop by if you want to sign up for a specific time
**Price:** Free to all collies
Please note: This is a blood draw.

Optimal Selection (TM)
Run by: Dr. Casey Knox, DVM, Wisdom Health
When: Wednesday, April 1 – Friday, April 3
9 – 11 AM and 1 – 3 PM
Cheek Swabs
Location: Collie Health Foundation Table – stop by if you want to sign up for a specific time
Price: $60 (we are working with Wisdom Health to see if a discount off the $60 can be offered)
Information to bring: Dog’s Registered Name, AKC #, Microchip # (if applicable), date of birth

Dermatomyositis (DMS) Risk Assessment
Run by: Sue Pierce-Kelling, Advisor for Wisdom Health on Optigen testing
When: Wednesday, April 1 – Friday, April 3 - Times to be announced
Location: Collie Health Foundation Table – stop by if you want to sign up for a specific time
Price: to be announced – Swabs will be available to purchase for $4.00/dog at the Membership Table
Information to bring: Dog’s Registered Name, AKC #, Microchip # (if applicable), date of birth

Progressive Retinal Atrophy (PRA-rcd2)
Run by: Sue Pierce-Kelling, Advisor for Wisdom Health on Optigen testing
When: Wednesday, April 1 – Friday, April 3 – Times to be announced
Location: Collie Health Foundation Table – stop by if you want to sign up for a specific time
Price: to be announced – Swabs will be available to purchase for $4.00/dog at the Membership Table
Information to bring: Dog’s Registered Name, AKC #, Microchip # (if applicable), date of birth

Eye Clinic
Run by: Dr. Riis, Ophthalmologist, Cornell University (Ret)
When: Friday, April 3 – 9:00am – 5:00pm, with a half-hour break at noon
Location: Location to be announced. If you wish to sign up for a desired time please text Dr. Riis at 518-928-7833.
Exams will be scheduled every 10 minutes. Walk-ins are welcome depending on availability.
Price: $45 (PayPal at time of test or check payable to CHF)
Forms: Will be provided but please have the following information: Registered Name, AKC/Other Registration #, DOB, Microchip #/Tattoo #. Please arrive 10-15 minutes prior to your appointment time as drops will be administered. (Drops used lasts about 2-3 hours and do not impair visual abilities)
The Collie Health Foundation at the AKC Museum of the Dog
By Gerrie Oliver

On behalf of the Collie Health Foundation, on November 17th, we had a wonderful opportunity to share our love for Collies, Terhune and Sunnybank at the AKC Museum of the Dog. Joining me was Kristina Marshall and Kathy George of the Terhune Sunnybank Memorial Group. The presentation was billed as "Collies and the Legacy of Albert Payson Terhune." While I provided the audience with Collie history, specific characteristics, herding abilities and wonderful temperament of the Collie, I also remarked on some of the health concerns and the important role the Collie Health Foundation plays in educating and protecting the health of our dogs through research and testing. Kathy spoke about the Sunnybank dogs in Terhune's books and Krissy talked about the amazing Sunnybank dogs who actually lived at The Place. My own Tessa (Norwood Colliecove Contessa) and Riggs (Ch Colliecove Black Gold, CA) were there to demonstrate the Collies' fine qualities.

Here is a copy of the email received from Emily Brostek, Manager of Educational Programs, afterwards:

Good afternoon ladies,
I heard about how fantastic this weekend's program went and I am so thrilled. Jeana told me how informative and interesting your presentation went and I think it is such a testament to your dedication to Collies as a whole. Jeana shared that you expressed interest in making this a yearly trip and I could not agree more! We will be in touch for future events and do let me know if there are things I can help you with in the future.

Thanks again, Emily Brostek
Manager of Educational Programs

2020 CCA Silent Auctions

We will be trying something a little different again this year with a limited number of daytime silent auction items. The pictured pieces of sterling silver jewelry, made in the USA, were generously donated to CHF by Dazzling Paws Jewelry (www.dazzlingpawsjewelry.com). The bidding on these pieces will be open for two full days so you will have plenty of opportunities to get your bid in, not just during the regular silent auction hours. Bidding will start Wednesday, April 1st when the silent auction tables open and end Thursday, April 2nd when the silent auction tables close. Ask any volunteer at the CHF tables to see the jewelry and place your bid(s). Be sure to check at the CHF tables to see what other items that might be offered at bid over multiple days!
MEMBERSHIP BENEFITS!

You know the Collie benefits when you join the Collie Health Foundation as your dues help fund health research. Indirectly you benefit when the dog you love is able to live a longer and healthier life because of genetic testing available to breeders or increased knowledge on how to prevent/treat disease or other health issues. Now, YOUR MEMBERSHIP ALSO OFFERS YOU A DIRECT BENEFIT in the form of subsidies for select DNA tests. These subsidies are available only to Collie Health Foundation members for Rough and Smooth Collies, all with no limits on the number of rebates per household - a definite membership advantage! Check out www.colliehealth.org for more information.

- **Optimal Selection™ Test** – Results for 200+ genetic diseases, of which & are of known relevance to the Collie. Testing includes MDR1, DM, CNN (Gray Collie), coat color and coat type. Regular Price: $130; Subsidy – $50 – Wisdom Health Discount 15% – **Your Cost $60.** Check swabs are provided by Optimal Selection.

  Contact Krista Hansen at assisttreas@colliehealth.org for a 1 time code **before** purchasing your tests at www.optimal-selection.com/optimal_selection_dogs/

  The **OPTIGEN PRA-rcd2** and **OPTIGEN Collie Eye Anomaly** (CEA) tests are available as an add-on to the **Optimal Selection** product. These are offered by Wisdom Health under exclusive license from the Cornell Research Foundation - no other test provider in the USA or Canada is legally able to provide this test.

  In order to test your dog for **OPTIGEN PRA-rcd2** and **OPTIGEN Collie Eye Anomaly**, you will need to purchase and submit your dog's **Optimal Selection** test. Once you receive the results, follow the prompts in the disease tab in your report to purchase the add-on tests for only 20 Euros each (approximately $25).

- **MDR1** – Washington State University/VetMed. $60 when ordered online. A CHF subsidy of $20 brings the total cost down to **$40.** Subsidy valid through 12/31/20. Check swabs provided by WSU.

  Contact Krista Hansen at assisttreas@colliehealth.org for a 1 time code **before** purchasing your tests at www.vcpl.vetmed.wsu.edu/

- **OFA and PennHIP Registration**

  Subsidy – CHF will reimburse $35 for hips and $5 for elbows for a total of $40. OFA certificate showing OFA number to be submitted to assisttreas@colliehealth.org. Valid 1/1/2020 – 12/31/2020

  PennHIP – Registration of Hip & Elbow x-rays performed by a PennHIP approved Veterinarian only. [https://antechimaging Services.com/antechweb/pennhip](https://antechimagingServices.com/antechweb/pennhip)

  Subsidy – CHF will reimburse up to $100 for PennHIP submission & $25 for OFA registration. OFA certificate showing OFA number to be submitted to assisttreas@colliehealth.org. **Both must be done to receive any reimbursement.** Valid 1/1/2020 – 12/31/2020
Grant Update

Andrea Fiumefreddo, MS, AKC CHF Director of Programs and Operations, has provided final progress reports on several AKC CHF grants the Collie Health Foundation has helped to fund:

**Grant 02328-A:** Harmonization of Genetic Testing for Dogs  
Principal Investigator: Brenda Bonnett, DVM, PhD; Research Institution: International Partnership for Dogs  
Progress Report: FINAL

**Original Project Description:**
The ever-increasing number of canine DNA tests and testing laboratories has made choosing quality DNA testing providers and the right DNA tests for health and breeding decisions challenging for dog owners, breeders and veterinarians. With no existing national or international standards of genetic testing for laboratory accreditation, or a standardization oversight group, there is a growing need for a reliable third party—a neutral organization that can provide guidance about test reliability and laboratory quality assurance. In response to this need, and with initial funding provided through generous contributions from the Orthopedic Foundation for Animals (OFA), the AKC Canine Health Foundation (CHF) and the founding partners of the International Partnership for Dogs (IPFD), a new initiative has been launched. Called the "IPFD Harmonization of Genetic Testing for Dogs," the initiative will provide practical support to address the challenges associated with the often confusing world of canine DNA testing. It will also strive to support consumer confidence in DNA testing, educate consumers in the use of these tests as tools to reduce the incidence of inherited disease, and reduce redundant international efforts.

The initiative’s aim is to create an open access, searchable and sustainable online resource for the international dog world, including breeders, dog owners and veterinarians that will: catalog information provided voluntarily from commercial test providers for genetic testing in dogs; describe expertise, quality assurance, activities and resources of the laboratories/test providers; host expert panel reviews of genetic tests, their reliability, and applicability; coordinate a program for standardized proficiency testing, and peer review; and link to and share existing and new resources for genetic counseling and education.

The initiative’s initial phase is already underway: the development of a working prototype of the online resource. Both the prototype and the final output will be hosted and available online to the public on the IPFD’s DogWellNet.com platform. The initiative will be guided by IPFD CEO Brenda Bonnett (Brenda.Bonnett@ipfdogs.com) and Project Director Aimee Llewellyn-Zaidi (Aimee.Llewellyn-Zaidi@ipfdogs.com), and will be overseen by a multi-stakeholder steering committee. Dr. Bonnett has been invited to speak directly to AKC Parent Club representatives. For more information on the initiative, sponsors and participants, go to the Initiative Description on DogWellNet.com.

**Report to Grant Sponsor from Investigator:**
The International Partnership for Dogs (IPFD) Harmonization of Genetic Testing for Dogs (HGTD) was launched in 2018 and expanded in 2019, with support from IPFD Partners and Sponsors, including many national kennel clubs, animal industry, the American Kennel Club (AKC) and the AKC-CHF. The need for this resource was recognized internationally to support breeders and consumer in navigating the rapidly changing, complex world of genetic testing which is complicated further by inadequate access to genetic counselling. As the genetic testing industry markets intensely on a Direct-to-Consumer model, and yet is essentially totally unregulated, an independent body is needed to help address the many challenges. These challenges have been widely presented in the media, and IPFD and the HGTD were featured in numerous consumer reports, publications and radio coverage, including Nature, The Atlantic, Animal Law Update, WBUR Boston (NPR), Science, Koiramme (Finland), and the Journal of the American Veterinary Medical Association (JAVMA) News. Much of this was in response to concerns being raised regarding the lack of a
regulatory body that has the authority to impose international standards on a burgeoning and unregulated industry. When the media chooses to focus almost exclusively on the problems in the world of genetic testing, IPFD has stepped in not only to clarify the attention being paid to these issues by many stakeholders, but also to provide balance, and remind everyone that genetic testing also has a great potential to support the health of dogs and dog breeds. We must work together to overcome challenges, demand high quality from those providing tests, and improve education about and support for proper application of genetic testing in order to achieve that potential.

The IPFD HGTD is a multi-stakeholder, collaborative effort to create an open access, sustainable online (DogWellNet.com) resource that:

- Catalogs information provided voluntarily from genetic test providers (GTPs) for genetic testing in dogs.
- Provides a catalogue of DNA tests, including clinical information, links to original discovery/research, breed-specific applications, gene(s) and mutation(s), and more.
- Describes expertise, quality assurance, activities and resources; and will host expert panel reviews of genetic tests;
- Is supporting collaboration on a program for standardized proficiency testing and potentially peer review and audit;
- Is being recognized as a key resource to support breeders by numerous national kennel clubs.
- Collates/assembles existing and new resources for genetic counselling and education; and provide the foundation for further developments.

The information on GTPs, including laboratories, academic institutions and commercial entities, as well as on tests/phenes, and breeds is a crucial base, needed to underpin appropriate breed-specific decision making. The integration with other IPFD developments on breed-specific conditions, will further improve education on and application of genetic testing, and ensure that this occurs in full recognition of the broadest understanding of health within a breed.

Following the public launch in April 2018 and into 2019 the resources and presence of the HGTD have continued to expand. We have made numerous international presentations of the HGTD resource, as well as on strategies for genetic counselling to researchers, veterinary professionals, owners/breeders, and other canine health and welfare specialists (i.e. 4th International Dog Health Workshop; the 10th International Conference on Canine and Feline Genomics; breed club talks; and others). The HGTD continues to receive enthusiastic endorsement from a wide array of stakeholder groups. In addition to support from the AKC, CHF, OFA and other Partners of the International Partnership for dogs, 42 of the major international GTPs across 22 countries, are now active participants providing funds, expertise and data to the HGTD. The online platform also encourages communication with DogWellNet.com users who are welcome to submit questions; breed representatives, researchers, and commercial test providers have helped us refine issues within specific breeds and improve accuracy on testing information above and beyond data provided by GTPs.

Veterinary professionals, breed health advisors, and dog breeders continue to embrace this initiative as crucial to supporting healthy breeding decisions for dogs, specifically the open and collaborative approach to developing resources that will help veterinarians to communicate with their clients, and breeders to make informed choices. The continued improvement to providing harmonized terminology and information, even in the absence of actual standards, particularly related to quality measures and disease/test information is bringing consistency to an unregulated industry, and has been recognized as a vital resource by researchers, as well. In addition to the continued development of the database, next steps include expanding to additional genetic test providers, adding further genetic counselling resources, and incorporating outcomes from working parties at the 4th International Dog Health Workshop, who are taking forward actions on test validation,
researcher/publication issues, and proficiency testing. This is now, and will always be, a work in progress, increasing and expanding as quickly as resources allow.

Grant 02383: Identifying Cellular Mechanisms of Inflammation During Canine Tick-Borne Diseases
Principal Investigator: Christine Petersen, DVM, PhD; Research Institution: University of Iowa
Progress Report: FINAL

Original Project Description:
Tick-borne diseases are found in all 50 states of the United States and are the most common vector-borne disease diagnosed in people in the US. The predominant disease is Lyme disease, caused by Borrelia burgdorferi and related species (sensu lato). Other important canine tick-borne diseases include those caused by Anaplasma platys, Anaplasma phagocytophilum (Anaplasmosis), Babesia canis, Babesia conradea and Babesia gibsonii (Babesiosis), and Ehrlichia canis, Ehrlichia chaffeensis and Ehrlichia ewingii (Ehrlichiosis). Many of these diseases also affect people. Dogs can serve as sentinel species for human disease and there are many areas where the immune responses and disease outcomes are very similar in people and dogs, meaning that important lessons can be learned by sharing information between human and animal health (One Health). The researchers will further investigate the dog’s immune system to determine which immune cells are responsible for the cure or creation of canine tick-borne disease. Through understanding which cells are responsible for causing disease, the goal is to then specifically target the molecules they produce using immunotherapy or immune modulation to improve treatment of tick-borne diseases in all dogs.

Report to Grant Sponsor from Investigator:
The overall goal of this study was to determine differences between dogs with asymptomatic versus symptomatic Lyme Disease, in order to better understand which cell types, or inflammatory factors produced by them, are helpful for controlling the disease. In this study, we identified sporting and hunting dogs at different clinical stages of Lyme Disease and sampled blood from them in the field. We have confirmed our field diagnoses with specialized assays performed by IDEXX Laboratories. In the lab, we have analyzed the percentage of Natural Killer immune cells and some markers of the activation state of these NK cells in the blood. We have found multiple interesting aspects of the canine immune response to Lyme Disease which were not previously known, and in fact will be novel contributions to the LD immunological knowledge, due to our ability to learn from asymptomatic exposed dogs which has not been done in people. We have found one subset of these cells, NKT cells, increased in dogs exposed to the bacteria that causes Lyme Disease, Borrelia burgdorferi, but do not show symptoms of Lyme Disease (asymptomatic dogs). Therefore, we hypothesize these cells are helpful in preventing Lyme Disease symptoms. The NK cells from dogs with symptomatic Lyme Disease showed a statistically enhanced inflammatory response in the presence of Lyme Disease causing bacteria, indicating that excessive inflammation may contribute to clinical disease. Additionally, a serum cytokine was elevated in asymptomatic dogs, thus this cytokine could be skewing the NK cell subset toward a less inflammatory phenotype to prevent disease. This cytokine may represent a novel therapeutic to help drive the immune response towards a healing phenotype. Finally, we have observed that NK and/or NKT cells from dogs exposed to Lyme Disease causing bacteria are able to kill target cells similar to healthy control dogs. This is further evidence that increased inflammation, and not an inability to kill bacteria, drives most of the clinical symptoms of canine Lyme Disease. Based on these results, therapies targeted towards decreasing NK cell-mediated inflammation, or to increase serum cytokines associated with NKT cell differentiation may help dogs maintain an asymptomatic state following Lyme Disease exposure. Throughout this study, we have established a good working relationship with the caretakers of the hunting and sporting dogs and have collected enough samples to meet our statistical needs for these experiments. We have prepared a strong draft of the manuscript describing our results and we plan to submit the results of these assays for publication this spring.
